

Water Intelligence Solutions: Construction

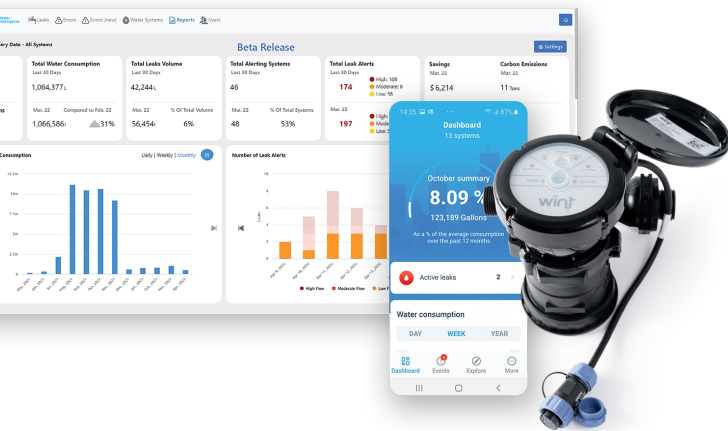

WINT Water Intelligence is an enterprise grade, comprehensive solution for water mitigation designed to protect and insure construction projects. Utilizing innovative in-line water management technology, WINT ensures real-time monitoring and proactive leak prevention, effectively safeguarding projects against water damage.

The WINT Advantage

Traditionally, fire posed the greatest threat to construction sites. In recent years, water has emerged as "The New Fire," surpassing fire as the primary cause of damage and insurance claims in both construction and operational settings.

Consequences of Water Damage on Construction Sites

- Costly delays in project timelines
- Structural problems such as weakening of foundations or framework
- Potential growth of mold, posing health hazards and requiring costly remediation
- Damage to reputation due to project setbacks and quality concerns
- Increases in insurance premiums and deductibles due to higher risk profiles

Insurance Benefits

In response to the growing threat of water damage, insurers have adjusted their policies, with deductibles increasing from tens of thousands of dollars a few years ago to as high as a quarter to a full million dollars today. Some insurers now mandate the implementation of water mitigation measures on-site as a prerequisite for coverage.

WINT and HSB joint program will protect contractors and developers from rising water damage costs with a builder's risk warranty up to \$250,000.
