

Prevent. Protect. Preserve.

Water Intelligence Solutions: Data Centers and Mission Critical Facilities

Water leaks can completely shut down a data center or other mission critical facilities.

WINT ensures the continuity of your business, prevents downtime as a result of leaks, and protects your valuable equipment and data from water disasters.

The WINT Advantage

In an industry where reliability and up time is paramount, water-related challenges such as business interruptions, and unforeseen maintenance have become major operational concerns, often resulting in significant financial impacts. With WINT, you can:

- **Detects leaks at the source**, not when water is already pooled on the floor
- **Advanced Artificial Intelligence** and pattern matching technology to deliver accurate and timely detection
- **Automatically stops the water flow** and alerts you immediately
- **Suggests where the leak is** for a quick fix
- **Integrates with Building Management** systems so operations staff can monitor water alerts using your standard operations tools.
- **Ensures protection at all times** with fully autonomous units.
