

# Water Intelligence Solutions: Facility Management

Your customers and tenants seek a smooth experience. They expect proactive prevention of issues and instant solutions when problems arise. Water leaks will be an inconvenience at best or a major source of business disruption and unnecessary expenses.

## The WINT Advantage

With WINT, your staff will receive alerts when water leaks into your facility. When a leak happens, you can choose to automatically shut-off the water or to be alerted for further investigation. For sustainability initiatives both you and your customers can regularly monitor the facility's water usage to identify misuse and waste, and to reduce consumption. With WINT, you can:

- **Alert staff** about leaks and waste in real time
  - **Get ongoing and historical reports** about water use and leaks
  - **Perform trend analysis** to identify potential water savings
  - **Remotely control valves** and water shut offs
- Support the organization's environmental agenda
- **Provide a water-secure facility** that reduces customers' water risk
  - **Levy water charges** that are fair
